technical data sheet

Machine construction:

- All parts are aluminium and stainless steel. The heated sealing head body is protected by a stainless steel guard to prevent the operator from coming into contact with this part of the machine.
- The MK4 machine offers electronically controlled cycle time as well as temperature. Height adjustment is standard as well as a container eject system for increased production. This machine is ideal for all sizes of free standing containers and can easily be connected to a take off unit for the packed product.
- Sealing temperature is electronically controlled with a range of 0 – 300° C
- The sealing head is pneumatically operated and is therefore not operator dependant.

INSTALLATION

Mains voltage	110 - 240 V AC (Dependant on country)
Frequency	50 / 60 Hz
Total loading	275 / 450 Watts (dependent on heater)
Fused @	3 amps
